

Microvita Seminar – New York Meditation Retreat

Every month Ananda Marga in New York City organizes a two days seminar. The program includes chanting and meditation which are most conducive for bringing good energy and creating a congenial atmosphere. This first weekend of the month of May we had the special participation through INTERNET of two expert in the Microvita Science. On Saturday Acarya Vimalananda Avadhuta, coordinator of the Microvita Research committee gave a lecture on the topic illustrating the advancement of the Microvita Science and its possible applications.

The following day Dr. Hans-Hoachim Rudolph (Manohara) went into details about a specific topic of Microvita and Cosmology

which has been subject of scientific research and discussions since the seminal discourse given by Shrii Prabhat Rainjan Sarkar in 1990. Dr. Rudolph has been doing extensive research since then and in 17 years he has reached some results publishing a book – From Imaginary Oxymora to Real Polarities and Return – and preparing for a second book which is almost ready for publishing. By lecturing around the world he has consolidated his theory about the microvita in relationship with most advanced research in quantum physics and mathematics.

At the seminar in New York were present several professors who got deep insights about the profundity of Shrii P. R. Sarkar contribution to science. Prof. Ravi Kulkarni has been introduced to Microvita Science recently and he is working on creating a framework of reference for further study harboring the beginning of the work for a Consciousness Research Institute in USA.
